PRINT AND ASSEMBLY INSTRUCTIONS

high-quality (HQ) print-and-play demo

These are instructions for producing a high-quality (HQ) print-and-play demo featuring 54 of the 240 cards from *The Story Engine®: Deck of Worlds™*. The HQ version works best if:

- You have a blade trimmer OR a box-cutter and ruler
- You don't mind using extra paper and making extra cuts
- You want the cards to be as high-quality and large as possible (3" x 3")

Otherwise, you may prefer to follow the instructions for the eco version. If you are printing at a print shop, you may wish to include this page as proof that you have permission to print this for personal use. (Speaking of which, yes, you do!)

To produce cards:

1. Open the HQ Cards PDF and print a test of p. 1 and 2 double-sided. For duplex printing, use the "flip on long edge" setting so card fronts and backs align properly.
2. Place the printed sheet in your blade trimmer with the card faces upward.
3. Cut along each of the lines marked with small ticks around the edges of the page. *(Tip: If your blade trimmer has a "rest" that squares the corner of the paper, set it to 3" to ensure all your cuts are the same size.)*
4. If the alignment of the test cards looks correct, print the remaining pages double-sided and repeat Steps 2 and 3. If cards are misaligned, you may want to print single-sided and glue cards faces and backs together.
5. Optional: Use a rounded corner punch to cut rounded corners on the cards.
6. Recycle the trimmings.

If printing in black and white or single-sided, you may wish to mark the edges of each card with a highlighter or marker for faster sorting.

To produce a guidebook: Open the Guidebook PDF. Print using the "Fit to Printable Area" setting in your PDF reader to be sure the guidebook fits on your paper.

To purchase the complete deck: Visit deckofworlds.com.
